

ARG Series Raw Water Strainers

Installation and Maintenance

Installation: Recommended installation is vertically oriented and above the waterline. Sizes smaller than 1-1/2" have an upper bracket which is fastened to a sturdy surface. Hang the strainer in the upper bracket to mark the position of the lower bracket (about 1" above the drain plug). Remove the strainer from the upper bracket to drill the holes for the lower bracket. The lower bracket is mounted open-side up. Hang the strainer in the upper bracket (the sight glass is resting against the lower bracket). Run the releasable strap around the sight glass (be sure to engage the lower bracket), and pull hand-tight.

ARG-P SERIES
with Non-Metallic
Filter Basket

Sizes 1-1/2" and larger do not have a separate upper bracket. Bolt through the cast-in bracket and into a bulkhead or stringer. Install the lower bracket in the same manner as described above.

Bonding: Strainers have 2 #10 bonding screws on the strainer head. Use the screw most convenient for connection to the boat bonding system. Warning: Do not make the strainer bonding connection in series with motorized equipment, as specified by ABYC, E-11, Figure-18.

Maintenance: Inspect and clean the basket frequently (the addition of GROCO SSA will tell you when to clean all of your strainers - call GROCO for details). Clean the sight glass with mild soapy water. Do not use chemical cleaners.

Replace the cap and tighten hand-tight only. GROCO SW-2531 is offered to break loose a stuck cap, but is not intended for cap tightening. Hand-tight is sufficient for the O-Ring seals.

Lubricate the Cap O-Rings and threads annually with silicon or Teflon based grease to make future maintenance easier.
